DETAILED ACTION

1. Applicant's election without traverse of Embodiment III (figure 3B, claims 1-2, 4-7, 13-14, 33-36, 38-41, and 46-47) in Paper No. 10 is acknowledged.

Claims 39-41 and 46-47 do not read on Embodiment III (figure 3B) because limitations " wherein a first end of at least some of the internal leads is exposed through a surface of means for encapsulating" claim 39, lines 8-9, and "internal leads having at least first ends exposed through the enclosure" claim 40, line 4. The limitations do not teach at all within Embodiment III. therefore, claims 39-41 and 46-47 are withdrawn from further consideration.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 4-7, 13-14, 33-36, and 38 are rejected under 35 U.S.C. 102(b) as being anticipated by Liang et al. (references cited by applicant).

As to claim 1, Liang discloses a semiconductor die package (10, column 3, line 32) as shown in figures 1-3 comprising:

conductive outer leads (20, column 3, lines 43-44) having first ends extending outside the package and second ends extending toward the interior of the package (see figure 1);

conductive inner leads (26, column 3, line 66) having first ends extending to and electrically accessible through a first surface (upper surface of pad 16) of the package; and

a first die (22, column 3, line 36) electrically connected to the inner and outer leads.

As to claims 2 and 38, Liang discloses the package (10) as shown in figures 1-3 wherein the second ends of the outer leads do not extend beyond the first ends of the inner leads (see figure 1).

As to claim 4, Liang discloses the package (10) as shown in figures 1-2 wherein the first surface is a bottom surface.

As to claim 5, Liang discloses a semiconductor die package as shown in figure 1 further comprising a printed circuit board (14) electrically coupled to the outer and inner leads.

As to claim 6, Liang discloses the package as shown in figure 2 the first ends of the inner leads (26) are approximately co-planar with the first ends of the outer leads (20).

As to claim 7, Liang discloses the package as shown in figure 2 wherein the first die (22) is positioned above the inner leads (26).

As to claim 13, Liang discloses the package as shown in figures 1-2 wherein the inner leads (26) further comprise an interior portion (wire 40) electrically accessible through the first surface, and wherein the die is further electrically coupled to the interior portion.

As to claim 14, Liang discloses the package as shown in figures 1-2 wherein the interior portion and the first ends of the inner leads and the first ends of the outer leads are electrically coupled to a printed circuit board (14).

As to claim 33, Liang discloses the package as shown in figures 1-2 wherein the conductive inner leads are formed from an internal paddle area (16, column 3, line 34).

As to claim 34, Liang discloses the package as shown in figures 1-2 further comprising means for (32, column 4, line 16) securing and electrically isolating the conductive inner leads.

As to claim 35, Liang discloses the package as shown in figures 1-2 wherein the first die (22) is attached to the internal paddle area (16).

As to claim 36, Liang discloses the package as shown in figures 1-2 wherein the first ends of the inner leads are closer to the die than the first ends of the outer leads.

Conclusion

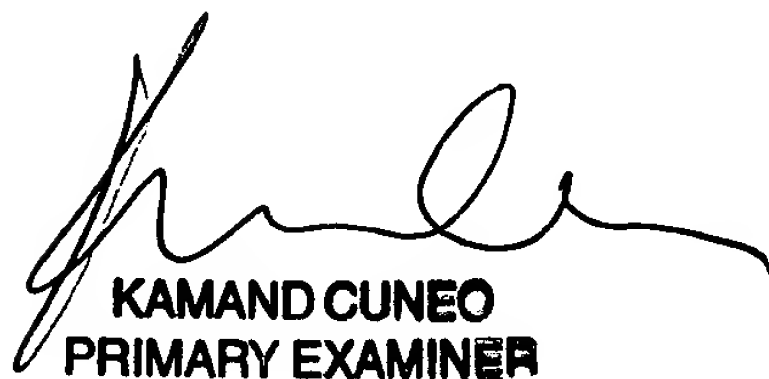

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. West, Horita et al., and Lee disclose related art.
